Instructions for use:

1. Unscrew and remove the retainer cup.

2. Place aerosol into unit.

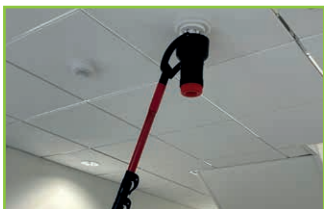

3. Replace retainer cup and screw closed.

4. Insert the head into the pole.

5. Make sure the Head is fitted into the pole securely.

6. Place the head over alarm and begin testing by pushing upwards for one second.

7. If the detector does not respond within 10 seconds, repeat test. If the detector does not activate, check equipment and retest. If the detector still does not activate it will require further investigation according to manufacturer's instructions.

* For more information and helpful videos please visit our website

Note

The clear delivery cup can be removed by simply pressing the two buttons on either side and pulling out. Replacement is a reversal.

This makes cleaning and replacing an easy task.

Tip

To avoid aerosol discharging in the Detectahead® whilst in transit – either loosen the retainer cup by 2 full turns or turn unit upside down so the can actuator isn't pressed by the head.

Maintenance / Service

Detectahead® can be cleaned with a damp cloth using warm water.

Detectahead® is designed to avoid components which are unnecessarily complicated and can fail. All components can be replaced easily by the end user without special tools or returns. If spare parts are required due to accidental damage, they're readily available at your distributor/ wholesaler or direct from Gas Safe Europe Ltd.

Disposal

Waste can be disposed at municipal or industrial landfill when complying with local regulations.

Manufactured with recycled and onward recyclable components.

We recommend:

Detectasmoke®

DSF1 – 250ml flammable smoke aerosol

DS1 – 250ml non-flammable smoke aerosol

Detectagas®
