Worldwide Patents Pending

## Introducing the new eco-friendlier concept in smoke detector testing

**DetectaReach®** is a hand held baton used for testing smoke alarms - when used alongside **DetectaSmoke®** aerosols. Engineers can quickly and effectively test alarms.

Scan for more detail

- ✓ **Re-usable** – Once the smoke canister is empty you can simply unclip the can and attach a new one meaning you do not have to throw away the plastic baton, reducing costs whilst being kind on the environment.
- ✓ **Lowest cost per test** method of testing alarms on the market.
- ✓ **Detector manufacturer approved**
- ✓ **Storing the can** – The can of smoke is stored within the baton meaning it is safe from being punctured etc when transporting.

### Operational Advantages

**DetectaReach®** The primary purpose is to provide a distance between the alarm and the test smoke to avoid overdosing the alarm chamber.

Whilst used alongside **DetectaSmoke®** then engineers can ensure they are carrying out competent tests with products endorsed by some of the world's leading alarm manufacturers.

Unlike other smoke batons that have been on the market for many years our baton is reusable, and the engineers simply click the empty can off and replace with a new can of **DetectaSmoke®**.

Every **DetectaReach®** baton comes with a can of **DetectaSmoke®** once the smoke runs out then extra cans of the smoke can be purchased.
